

One Collector to Rule Them All

Traces, Metrics, and Profiles with the OTel Collector

Florian Lehner

The Siloed Telemetry Problem

Fragmented
Context

Different
solutions for
different
signals.

The Missing
"Why"

Without
correlation
of signal the
"Why" stays
unknown.

The OTel Collector

What OTel Is

A standardized collection of APIs, SDKs, and tools designed to generate and manage traces, metrics, logs and profiles.

What OTel Is Not

OTel is NOT an observability backend. It handles data collection and processing, not storage or analysis.

Vendor Neutral

Designed for total portability. No vendor lock-in. Send your data to the backend of your choice.

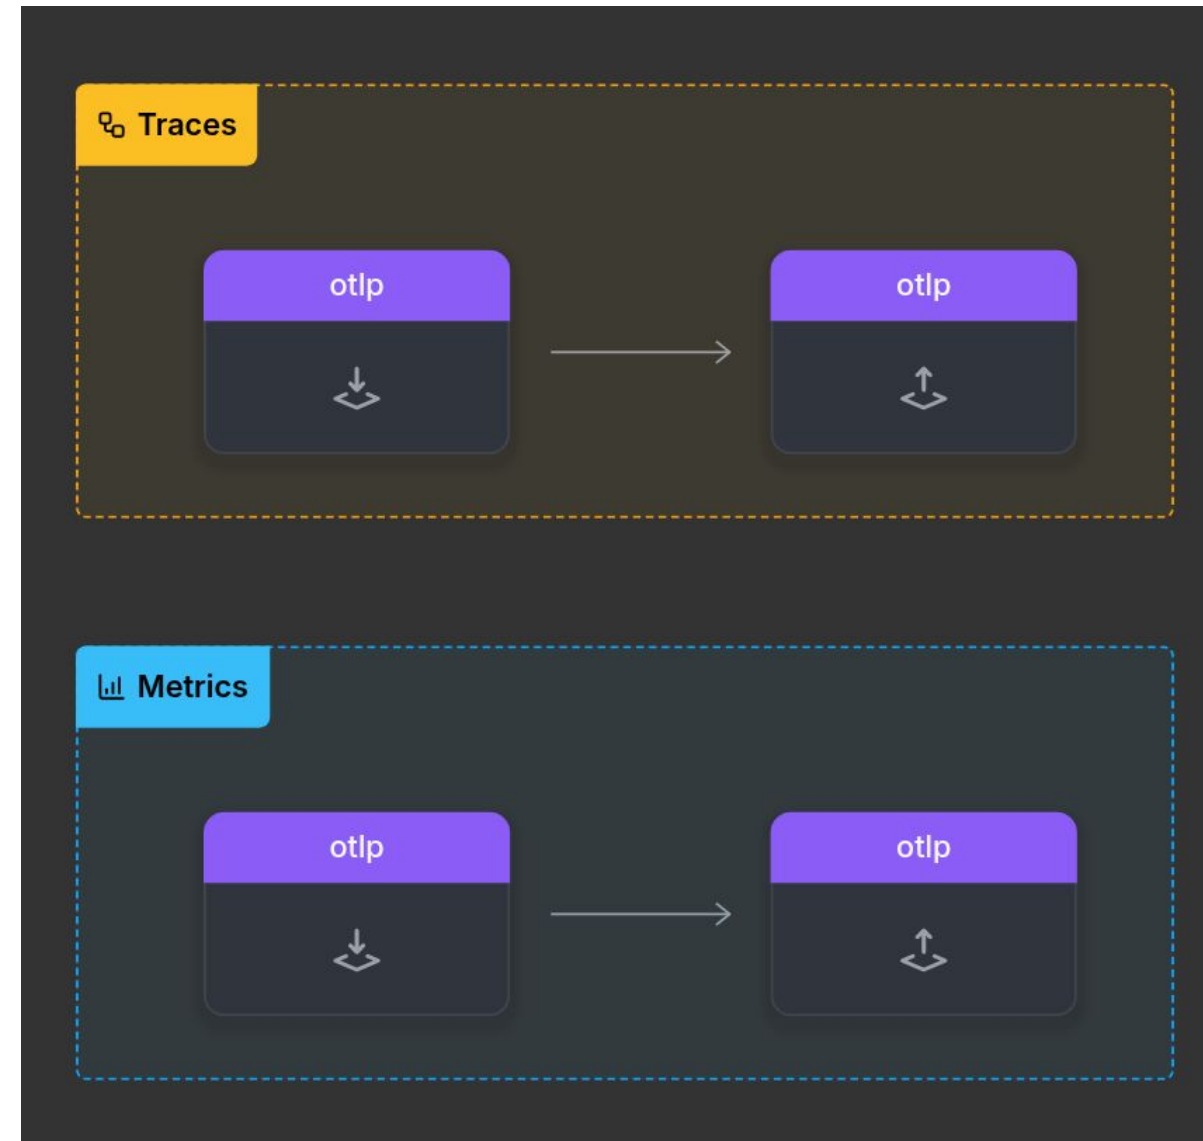

The OTel Collector pipeline

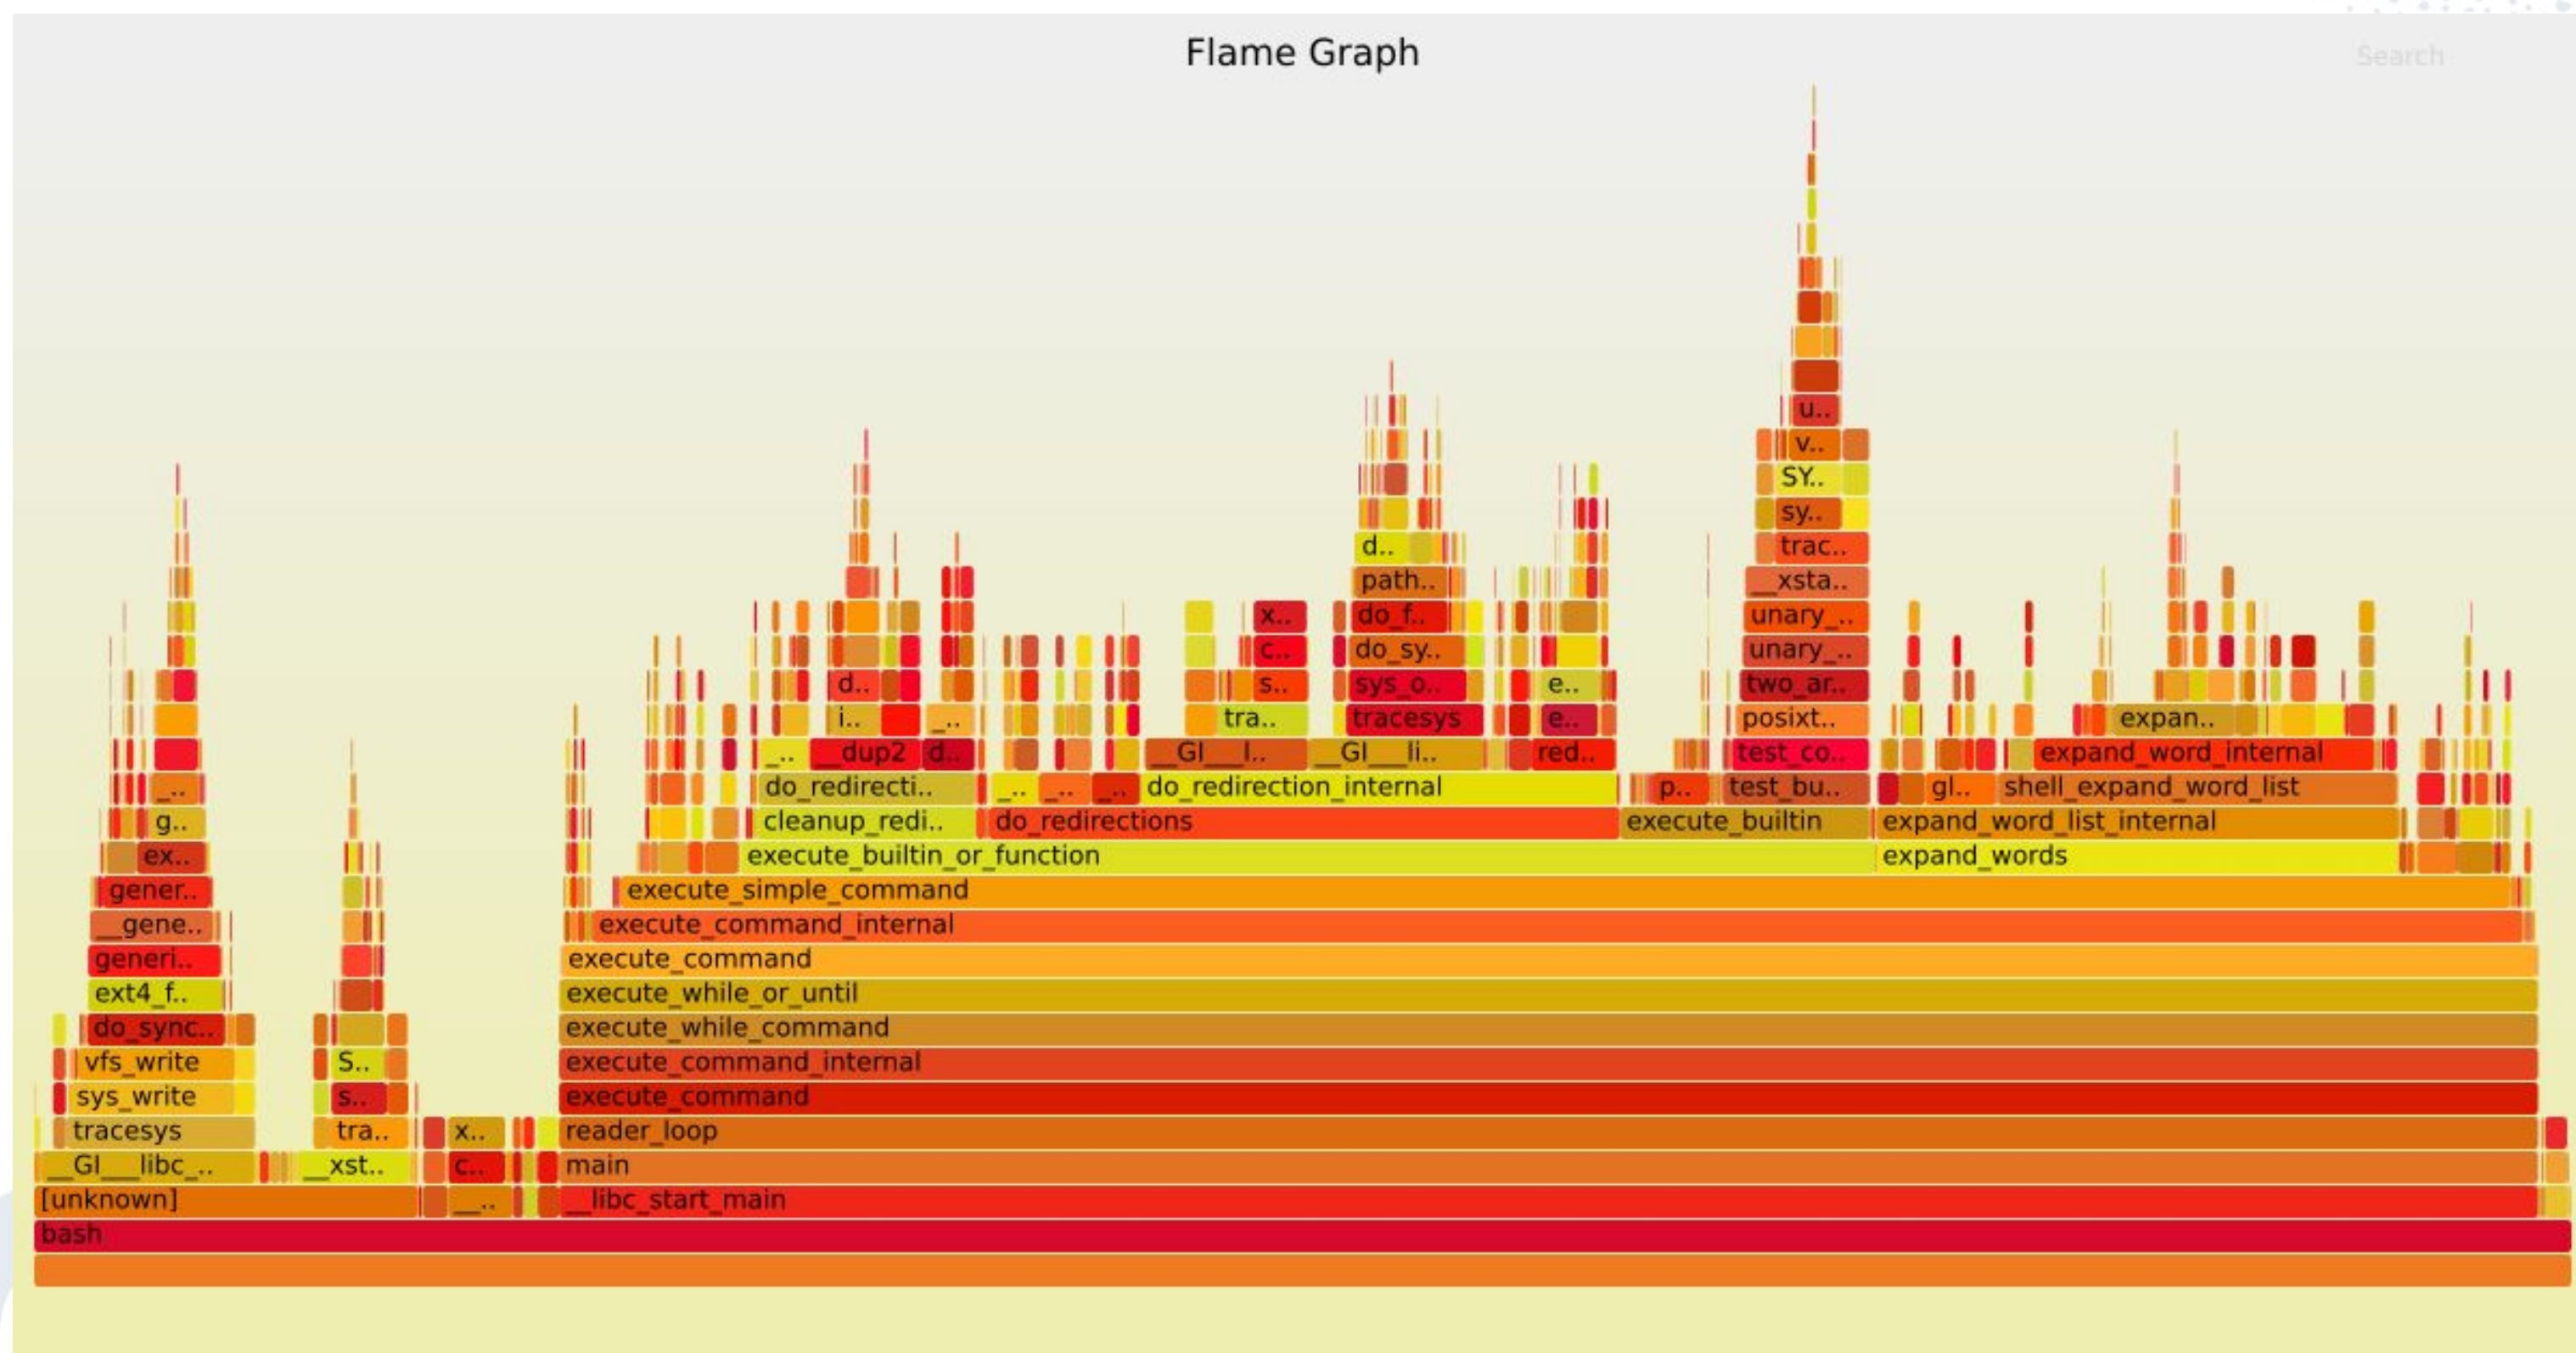

The OTel Collector config

```
receivers:  
  otlp:  
  
exporters:  
  otlp:  
    endpoint: otelcol:4317  
  
service:  
  pipelines:  
    traces:  
      receivers: [otlp]  
      exporters: [otlp]  
    metrics:  
      receivers: [otlp]  
      exporters: [otlp]
```

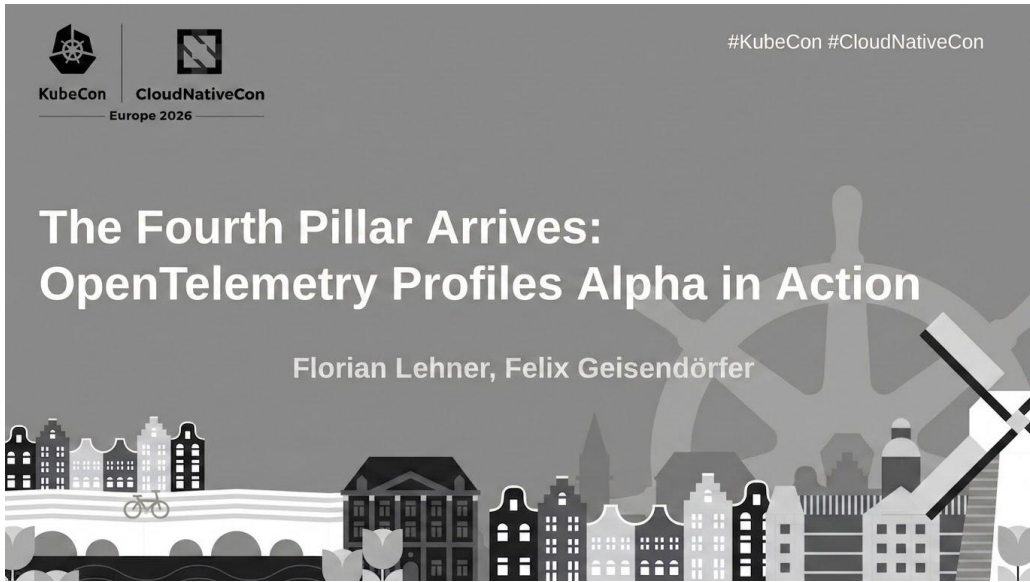

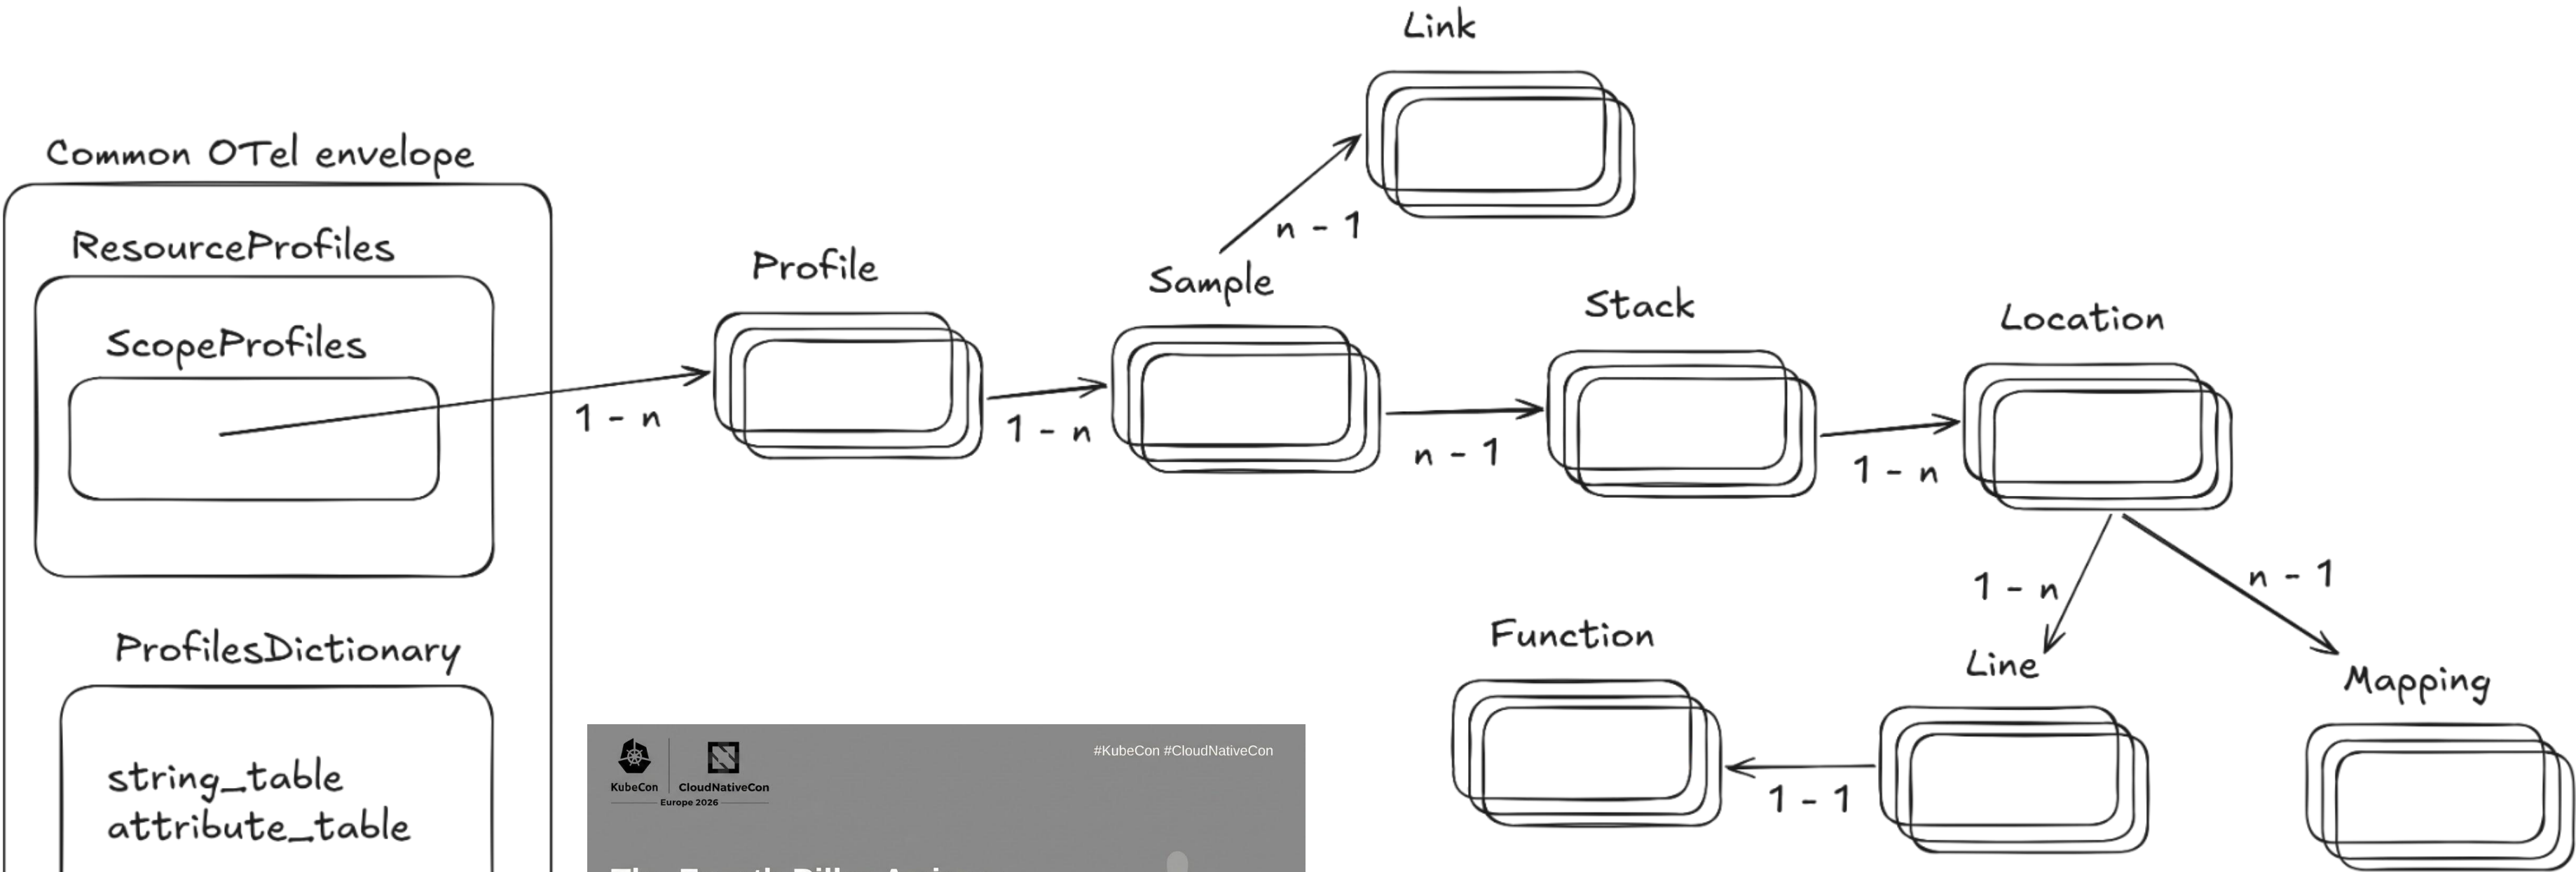

The OTel Profiles

Why Profiles?

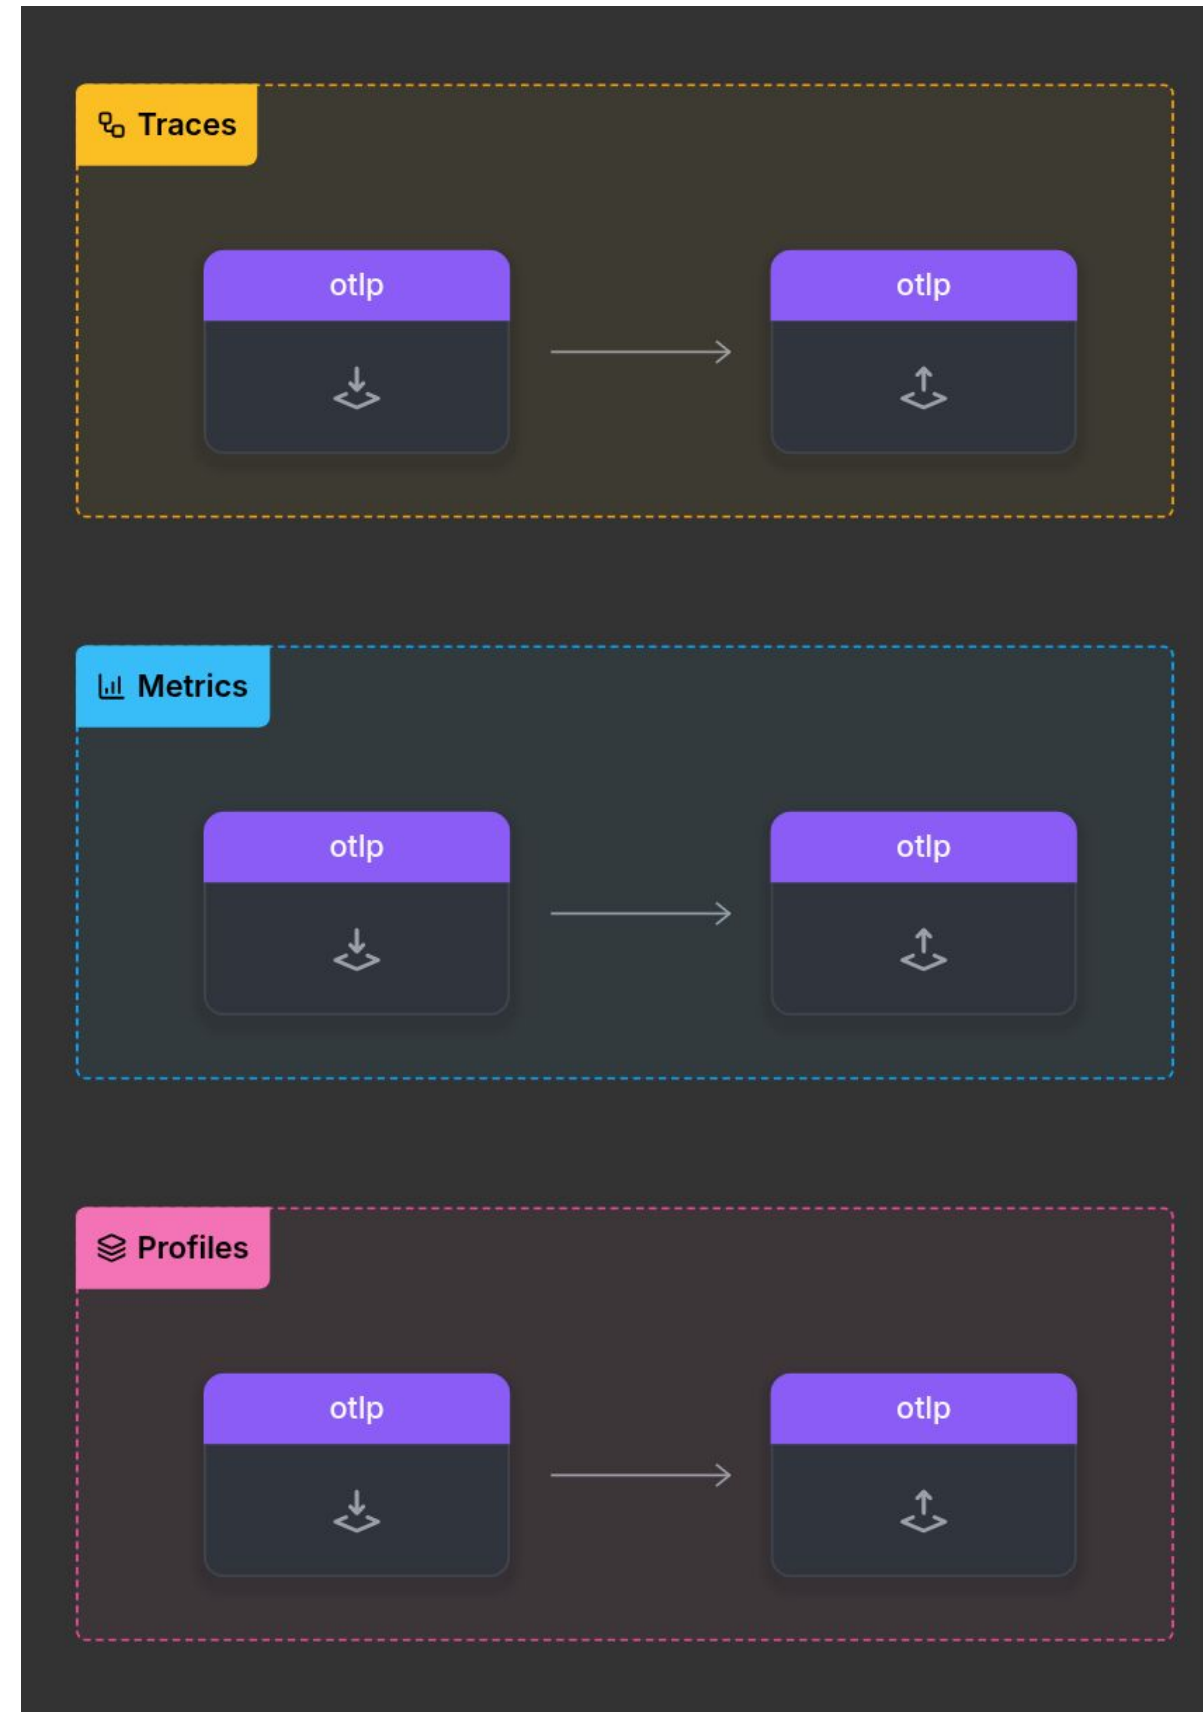

OTel Profiles

<https://youtu.be/TKp2snmgvtQ>

The OTel Collector config with profiles

```
receivers:  
  otlp:  
  
exporters:  
  otlp:  
    endpoint: otelcol:4317  
  
service:  
  pipelines:  
    traces:  
      receivers: [otlp]  
      exporters: [otlp]  
    metrics:  
      receivers: [otlp]  
      exporters: [otlp]  
    profiles:  
      receivers: [otlp]  
      exporters: [otlp]
```
