

Jujutsu for Gophers

About me

- 28 years old
- Long time user & contributor to the project
- Also a presenter at the first JJ conference
- Interested in Devops/SRE work
- Also like reading fantasy and sci-fi
- Still looking for work

Agenda

- Reasons to use Jujutsu
- Differences to Git
- A whirlwind tour of it (Demo)
- Questions and useful links

Reasons to use Jujutsu

1. You can rebase all the time
2. Every action is undoable
3. Conflicts are deferrable
4. CLI is small and very intuitive
5. Since it is built for concurrent workflows it's better in the agentic era
6. Makes powerful workflows easily accessible
7. Monthly Releases
8. Long deprecation cycles and very open to feedback

Differences to Git

- Branches are not automatically updated
- Introduces new types of conflicts
  - Divergence
  - Bookmark conflict
  - File conflict
- Always in a detached HEAD state
- Supports multiple conflict sides (more than two)
- By default better at linear workflows (many merges can slow down commands)
- There are missing features

Demo

Questions and useful links
